WORLD LEADER IN AIR COOLING

EVAPORATIVE AIR COOLING.

- Evaporative air cooling is the most efficient and environment-friendly cooling technology which works on the principle of heat absorption by water evaporation.
- A pump circulates water from the tank on to a cooling pad making it wet.
 - A fan/blower draws hot air from outside the unit and forces it through the moistened pad.
 - As the air passes through the wet pad it gets cooled by evaporation.
 - The blower and motor are sized and designed to deliver the appropriate airflow.
